WHITE CONCRETE GIVES AN IDENTITY TO EVERY OUTDOOR SPACE

Concrete pavements and masonry products give character to our surroundings. AALBORG WHITE® makes it possible to play with a full array of colors, which allows for its own identity of each design.

White concrete from AALBORG WHITE® are perfectly suitable to be applied on different coverings of outdoor spaces. Think of garden ornaments and paving products. Semi-dry molded in a machine to make blocks, white concrete is usually just used as a two-layered coating. The surface can be smooth, sandblasted, washed or polished, and no filler is needed when applying.

GARDEN ORNAMENTS

UHPC is a rising concrete technology for slim aesthetic and structural concrete elements for masonry, with high mechanical, chromatic and sustainability performance. The typical and constant quality of AALBORG WHITE® allows for these properties. For example, in garden or street furniture, these semi-dry molded products - which look like natural bricks and can be used likewise- can be both decorative as well as weight-bearing. The products, produced with molds, are ideally suited for architectural projects which need an eye for detail.

PAVING PRODUCTS

Paving products like tiles are one- or two-layered products with top wet molded. While applying tiles, a concrete base and/or a curing joint is needed.

White concrete is also very suitable for decorating a garden. The effect of reflection prevents materials from overheating in the sun.

LARGE PAVING TILES

Velvety soft, distinctive tiles for a garden, terrace, pool deck or garden path, the Mega Tile Smooth by Ebema_Stone&Style gives added value to each project, from industrial, to classical, or modern style. Over time this terrace tile will get an organic natural look

‘ The velvety soft distinctive tiles are an added value in every garden design ’

with unique color gradations. The living tile is perfectly suited for heavily used gardens and with endless elegance they can be seamlessly combined with Ebema_Stone&Style garden furniture.

WHITE CONCRETE

White concrete has chemical and purity requirements and superior mechanical properties, which can only be achieved with advanced production technologies, and AALBORG WHITE® is in the right position to produce above mentioned products.

AALBORG WHITE® concrete is a diverse construction material. It can be used to construct large functional buildings, as well as the construction of more decorative products. “Our ambition is to continuously facilitate and inspire the complete value chain of architects, engineers and producers up to end users. For example, by offering customer-driven sustainable innovations,” says the manufacturer.

QUALITY CONTROL AND STANDARDIZATION

AALBORG WHITE® concrete is a high class quality product due to uniform and consistent quality of products manufactured in six worldwide manufacturers of white concrete. “Our research and quality control center uses a worldwide quality system which consists of online quality control, internal benchmarking and collective procedures and standards. A ‘Quality Scorecard’ is created to audit each manufacturer and review performance in all aspects of quality. It includes management of materials, quality control systems, and laboratory performance of the manufacturer, as well as handling of customer complaints and fine tuning based on requirements of customers.”
